## Volume of Tourism

## Staying visits in the county context

## Thanet - 2021 Results

All figures have been rounded and some tables may show slight discrepancy between totals and sub totals.

Staying trips in the county context	Domestic trips ('000)	Overseas trips ('000)
Ashford	236	27.5
Canterbury	368	48.0
Dartford	111	11.0
Dover	257	23.1
Folkestone & Hythe	282	34.0
Gravesham	104	9.0
Maidstone	229	27.9
Medway	286	31.7
Sevenoaks	137	15.2
Swale	239	19.2
Thanet	291	39.2
Tonbridge and Malling	154	14.9
Tunbridge Wells	196	21.7
<b>Kent</b>	<b>2,890</b>	<b>322.4</b>

Staying nights in the county context	Domestic nights ('000)	Overseas nights ('000)
Ashford	675	118.8
Canterbury	1,136	259.0
Dartford	351	44.8
Dover	778	102.0
Folkestone & Hythe	875	136.0
Gravesham	330	48.0
Maidstone	736	164.0
Medway	996	174.0
Sevenoaks	430	76.0
Swale	962	89.0
Thanet	924	260.0
Tonbridge and Malling	482	69.0
Tunbridge Wells	566	109.0
<b>Kent</b>	<b>9,241</b>	<b>1,649.6</b>

Expenditure in the county context	Domestic spend (millions)	Overseas spend (millions)
Ashford	£42.1	£5.4
Canterbury	£59.5	£13.6
Dartford	£16.9	£2.3
Dover	£48.9	£6.0
Folkestone & Hythe	£53.6	£8.3
Gravesham	£14.8	£2.1
Maidstone	£36.7	£8.1
Medway	£40.8	£8.3
Sevenoaks	£22.0	£4.0

Difference	45%	206%	50%	84%	8%	68%

### Breakdown of expenditure

### Breakdown of expenditure

### Other Expenditure Associated with Tourism Activity

Other expenditure associated with tourism activity - Estimated spend				
Second homes	Boats	Static vans	Friends & relatives	Total
£598,000	£690,000	£8,000	£17,734,000	£19,030,000

Spend on second homes is assumed to be an average of £2,050 on rates, maintenance, and replacement of furniture and fittings. Spend on boats assumed to be an average of £2,050 on berthing charges, servicing and maintenance and upgrading of equipment. Static van spend arises in the case of vans purchased by the owner and used as a second home. Expenditure is incurred in site fees, utility charges and other spending and is estimated at £2,050. Additional spending is incurred by friends and relatives as a result of people coming to stay with them. A cost of £185 per visit has been assumed based on national research for social and personal visits.

## Direct Turnover Derived From Trip

## Thanet - 2021 Results

Business turnover arises as a result of tourist spending, from the purchase of supplies and services locally by businesses in receipt of visitor spending and as a result of the spending of wages in businesses by employees whose jobs are directly or indirectly supported by tourism spending.

		Staying Visitor	Day Visitors	Total
Accommodation		£21,065,000	£784,000	£21,849,000
Retail		£13,470,000	£35,277,000	£48,747,000
Catering		£15,558,000	£38,023,000	£53,581,000
Attractions		£8,734,000	£12,054,000	£20,788,000
Transport		£6,910,000	£7,628,000	£14,538,000
Non-trip spend		£19,030,000	£0	£19,030,000
<b>Total Direct</b>	<b>2021</b>	<b>£84,767,000</b>	<b>£93,766,000</b>	<b>£178,533,000</b>
Comparison	2020	£60,063,000	£45,348,000	£105,411,000
Difference		41%	107%	69%

Adjustments have been made to recognise that some spending on retail and food and drink will fall within attractions or accommodation establishments. It is assumed that 40% of travel spend will take place at the origin of the trip rather than at the destination.

## Supplier and Income Induced Turnover

		Staying Visitor	Day Visitors	Total
Indirect spend		£4,604,000	£5,139,000	£9,743,000
Non trip spending		£2,855,000	£0	£2,855,000
Income induced		£10,148,000	£10,287,000	£20,435,000
<b>Total</b>	<b>2021</b>	<b>£17,607,000</b>	<b>£15,426,000</b>	<b>£33,033,000</b>
Comparison	2020	£11,851,000	£7,004,000	£18,855,000
Difference		49%	120%	75%

Income induced spending arises from expenditure by employees whose jobs are supported by tourism spend.

## Total Local Business Turnover Supported by Tourism Activity – Value of Tourism

		Staying Visitor	Day Visitors	Total
Direct		£84,767,000	£93,766,000	£178,533,000
Indirect		£17,607,000	£15,426,000	£33,033,000
<b>Total Value</b>	<b>2021</b>	<b>£102,374,000</b>	<b>£109,192,000</b>	<b>£211,566,000</b>
Comparison	2020	£71,914,000	£52,352,000	£124,266,000
Difference		42%	109%	70%

## Employment

## Employment

## Thanet - 2021 Results

The model generates estimates of full time equivalent jobs based on visitor spending. The total number of 'actual' jobs will be higher when part time and seasonal working is taken into account. Conversion of full time equivalent jobs into actual jobs relies on information from business surveys in the sectors receiving visitor spending. A new Full Time Equivalent tourism job is created with every £48,600 increase in tourism revenue.

### Direct Employment

**The key 2021 results of the Economic Impact Assessment are:**

**3.9 million trips** were undertaken in the area  
**3.6 million** day trips  
**0.3 million** overnight visits

**1.2 million** nights in the area as a result of overnight trips

**£179 million** spent by tourists during their visit to the area  
**£15 million** spent on average in the local economy each month.

**£70 million** generated by overnight visits  
**£99 million** generated from day trips.

**£212 million** spent in the local area as result of tourism, taking into account multiplier effects.

**5,831 jobs** supported, both for local residents from those living nearby.  
**5,134 tourism jobs** directly supported  
**697 non-tourism related jobs** supported linked to multiplier spend from tourism.

## **Appendix I - Introduction about Cambridge Model**

This report examines the volume and value of tourism and the impact of that expenditure on the local economy. The figures were derived using the Cambridge Economic Impact Model and the research was undertaken by Destination Research.

The model utilises information from national tourism surveys and regionally based data held by Destination Research. It distributes regional activity as measured in those surveys to local areas using 'drivers' such as the accommodation stock and occupancy which influence the distribution of tourism activity at local level.

### **Limitations of the Model**

The methodology and accuracy of the above sources vary. The results of the model should therefore be regarded as estimates which are indicative of the scale and importance of visitor activity in the local area. It is important to note that in the national tourism surveys the sample sizes for each area changes year on year. This is as a result of the random probability nature of the methodology. As such, the results of the Cambridge Model are best viewed as a snapshot in time and we would caution against year-on-year comparisons.

It should be noted that the model cannot take into account any leakage of expenditure from tourists taking day trips out of the area in which they are staying. While it is assumed that these may broadly balance each other in many areas, in locations receiving significant numbers of day visitors from London, there is likely to be an underestimate in relation to the number of overseas day visitors staying in holiday accommodation in London.

Whilst it is important to be aware of these issues, we are confident that the estimates we have produced are as reliable as is practically possible within the constraints of the information available.

### **Rounding**

All figures used in this report have been rounded. Therefore, in some tables there may be a slight discrepancy between totals and sub totals.

### **Data sources**

The main national surveys used as data sources in stage one include:

- Great Britain Tourism Survey (GBTS) - information on tourism activity by GB residents;
- International Passenger Survey (IPS) information on overseas visitors to the United Kingdom;
- Day Visits in the annual Great Britain Day Visitor Survey using information on visits lasting more than 3 hours and taken on an irregular basis

These surveys provide information down to a regional level. In order to disaggregate data to a local level the following information sources are used:

- Records of known local accommodation stock held by Destination Research;
- VisitEngland's surveys of Visits to Attractions, which provide data on the number of visitors to individual tourist attractions;
- Latest estimates of resident population as based on the 2011 Census of Population;
- Selected data from the 2011 Census of Employment;
- Selected data on the countryside and coast including national designations and length of the coastline.

### **Staying Visitors**

The GBTS provides information on the total number of trips to the region and the relative proportions using different types of accommodation. By matching these figures to the supply of such accommodation, the regional average number of trips per bedspace or unit of accommodation can be derived. The IPS provides information on the total number of trips by overseas visitors to the region. The model uses three year rolling averages to reduce extreme highs and lows which are due to small sample sizes, rather than being a reflection on drastic changes in demand year-on-year.

### **Day Visitors**

Information on day trips at the regional level is available from the Day Visits in Great Britain survey (GBDVS). A day visitor is defined as someone making a day trip to and from home for leisure purposes. The report excludes trips undertaken for business or study purposes. This report presents data on those who took trips of at least 3 hours duration on an irregular basis as defined by the GBDVS. These are identified as tourism day trips by the Department for Digital, Culture, Media and Sport

### **Impact of tourism expenditure**

This section examines the impact of the tourism expenditure in terms of the direct, indirect and induced expenditure as well as an estimate of the actual jobs (both direct and indirect) supported by tourism expenditure in the county.

The GBTS, IPS and Day Visits to Great Britain survey data on the breakdown of visitor spending. The impact of this initial round of expenditure will be subsequently increased by multiplier effects. These arise from the purchase of supplies and services by the businesses in receipt of visitor expenditure (indirect impacts), and by the income induced-effects arising from the spending of wages by employees in the first round of business and in subsequent expenditure in supplier business (induced impacts).

The New Earnings Survey which provides information on wage levels by industry sector and region; An internal business database which includes data on the structure of business expenditure, local linkages and multiplier ratios drawn from a wide range of business and economic studies carried out by Geoff Broom Associates, PA Cambridge Economic Consultants and others. By applying the breakdown to the estimates of visitor spending, the model generates estimates of total direct spending.

Evidence from national studies suggests that some minor adjustments are required to match visitor spend to business turnover – for example, some expenditure on food and drink actually takes place in inns and hotels that fall in the accommodation sector and within attractions. More significantly, expenditure on travel costs associated with individual trips is equally likely to take place at the origin of the trip as the destination. Therefore, the model assumes that only 40% of travel expenditure accrues to the destination area.

### **Number of full time job equivalents**

Having identified the value of turnover generated by visitor spending, it is possible to estimate the employment associated with that spending. Wages for staff and drawings for the proprietors will absorb a proportion of that turnover. By applying these proportions to the overall additional turnover in each sector, the amount of money absorbed by employment costs can be calculated. The New Earnings Survey provides data from which the average costs by business sector, adjusted to take account of regional differences, can be calculated.

After allowing for additional costs such as National Insurance and pension costs, an average employment cost per full time equivalent job can be estimated. The number of such jobs in the local area can then be estimated by dividing the amount of business expenditure on wages and drawings by the average employment cost per job.

### **Number of Actual Jobs**

The model generates estimates of full time equivalent jobs based on visitor spending. However, the total number of actual jobs will be higher when part time and seasonal working is taken into account. The full time equivalent jobs arising directly from visitor spending are converted into actual jobs using information from business surveys in the sectors receiving visitor spending (principally accommodation, food and drink, retail, attractions, transport). In general, the conversion factor between full time equivalent jobs and actual jobs varies around 1.5 in those sectors.

The indirect and induced jobs arise across a much wider range of employment sectors. Therefore, the average 1.16 for all sectors based on Census of Employment data has been used to convert full time equivalent jobs in this sector to actual jobs.

The employment estimates generated by the model include both self-employed and employed people supported by visitor expenditure. The model also includes an estimate of the additional jobs arising in the attractions sector, which are not related to visitor expenditure. However, the numbers do not include other tourism-related employment such as jobs in local authorities arising from their tourism functions, e.g. tourist information staff, additional public health, parks and gardens, public conveniences, maintenance sections and jobs arising from capital investment in tourism facilities.

### **Local level data for Kent EIA Reports 2021**

The Cambridge Model allows for the use of local visitor related data. Local data from visitor surveys and other sources is not always sufficiently detailed or available regularly enough to make the results consistent. We rely on partners to collect additional locally sourced data to feed into the model. We have also used data from the NCTA Business Survey, Visit Kent's accommodation audit and, the Visit Kent's Business Barometer and headline STR figures (monthly/yearly occupancy and supply and demand).

#### **KENT**

- Kent Accommodation Study (2020)
- Airdna data – Kent level
- Visit Kent Perception Research
- Annual Visit Kent Business Barometer, 2019 and 2020
